TITLE: Concrete washout container

PUBLICATION-DATE: January 12, 2006

INVENTOR-INFORMATION:

NAME	CITY	STATE	COUNTRY
Jenkins; Mark	Elk Grove	CA	US

US-CL-CURRENT: 134/104.2; 134/10

ABSTRACT:

A washout container to which are mounted inclined ramps that allow a transit mixer, concrete pumping truck or other concrete handling vehicle to drive up over a portion of the container for dumping excess concrete and washing out waste concrete. The container cross-section may be rectangular to semi-circular, and is preferably fabricated with a steel structure. A watertight latching door assembly is coupled to the container to prevent leakage of collected liquid concrete waste material while allowing solidified concrete materials to be unloaded at a disposal site. The interior of the container is preferably lined with a material to which concrete will not adhere. The liner may be applied as a coating to the interior of the container or as a solid material retained within the container. In this way, solidified waste concrete can be easily removed from the container at the disposal site and preferably crushed for recycling.

TITLE: Disposal of cement waste from chute

PUBLICATION-DATE: October 6, 2005

INVENTOR-INFORMATION:

NAME	CITY	STATE	COUNTRY
Elefsrud, Kevan P.	Hisparia	CA	US

US-CL-CURRENT: 366/14; 366/47

ABSTRACT:

An apparatus and method for collecting and transporting concrete waste comprises a container, a cart for supporting and moving the container and lifting means attached to the frame of a cement truck for lifting the cart and container off the ground for transport. The apparatus may be stored on a cement truck so that the apparatus prevents disposal of cement and concrete waste in an unlawful or unsightly manner and allows the cement and concrete waste to be returned to a

cement and concrete production facility and recycled. The cart includes means for tilting the container about its midsection by means of an elongated lever or handle. The cart also includes means for limiting the forward tilting of the container and for locking the container in an upright position. A wheel locking mechanism for at least one wheel of the cart is provided. The mechanism is manually engaged or disengaged.

TITLE: Method for producing medical container and medical container

PUBLICATION-DATE: September 9, 2004

INVENTOR-INFORMATION:

NAME	CITY	STATE	COUNTRY
Tajima, Kyouzuke	Tokyo		JP

US-CL-CURRENT: 428/35.7; 156/245, 156/272.8

ABSTRACT:

The present invention provides a method for producing a medical container capable of firmly and surely welding, to a sheet or film mainly composed of a thermoplastic resin not limited to those containing polar groups, a port member mainly composed of a thermoplastic resin that is identical with or different from the sheet or film, and a medical container obtained by the production method. This method comprises a first process for molding the sheet or film into a bag shape and temporarily fixing the port member to a prescribed position of the bag-shaped sheet or film; and a second process for irradiating the temporary fixing part 7 of the bag-shaped sheet or film 1 and the port member 5 with laser beam 35 to weld the sheet or film to the port member.

PUBLICATION-DATE: June 3, 2004

INVENTOR-INFORMATION:

NAME	CITY	STATE	COUNTRY
Inglese, Pat	Smyrna	GA	US

US-CL-CURRENT: 414/404

ABSTRACT:

A device and method for residual concrete collection for disposal or reclamation of same, wherein a bag is formed, generally prismatic in structure, with a rectangular opening in the top. Suspension straps serve to attach the bag and support it below the outflow of concrete mixing or delivery equipment such that concrete and/or water will flow into the device, wherein water will subsequently pass therethrough. The device and collected concrete can then be moved and/or stored for disposal or reclamation of the concrete.

NAME	CITY	STATE	ZIP CODE	COUNTRY
von Wilcken; Alexander	Munich			DE

US-CL-CURRENT: 366/26; 366/33, 366/53, 366/606

ABSTRACT:

The invention relates to a transportable concrete mixing plant (10) which comprises a plurality or releasably interconnected mixing plant components. Said mixing plant components are contained in a plurality of containers (C1, C2, C3, C4, C5, C6, C7, C8, C9, C10, C11, C12, C13), during transport. At least part of said containers (C1, C2, C3, C4, C5, C6, C7, C8, C9, C10, C11, C12, C13), preferably all of said containers, are standard ship containers or can be assembled to standard ship containers. Said standard ship containers meet the international standards for uniform transport. In the operational state of the mixing plant (10), said containers represent the support structure for mixing plant components and/or containers for concrete starting materials.

TITLE: Container for the collection and spreading of core melt and a nuclear power plant with such a container

DATE-ISSUED: February 12, 2002

INVENTOR-INFORMATION:

NAME	CITY	STATE	ZIP CODE	COUNTRY
Kolev; Nikolay	Herzogenaurach			DE

US-CL-CURRENT: 376/280

ABSTRACT:

The container collects and spreads core melt in a nuclear power plant. The container has a structured bottom, particularly a cartridge-like bottom. The bottom has a material of good thermal conductivity, a plurality of geodetically highest points and a plurality of geodetically lowest points (5) and an outer wall. The outer wall extends with an upward slope between a geodetically lowest point and an adjacent geodetically highest point. A steam conduit which runs through the container interior is provided at each geodetically highest point. The container allows external cooling of core melt. As a result, the formation of radioactive aerosols, the occurrence of a steam explosion and the formation of hydrogen are avoided. In addition, the cooling is made particularly effective by the upward slope of the outer wall since the formation of a spatially fixed steam region, which is associated with a decrease in thermal conductivity, is prevented. The invention furthermore relates to a nuclear power plant with a container for the collection and spreading of core melt.

TITLE: Resin composition for hard coating and coated product

DATE-ISSUED: August 4, 1998

INVENTOR-INFORMATION:

NAME	CITY	STATE	ZIP CODE	COUNTRY
Inagaki; Hajime	Iwakuni			JP
Yoshii; Koji	Saeki-Gun			JP

US-CL-CURRENT: 522/16; 522/12, 522/167, 522/39, 522/7

ABSTRACT:

A surface-coated vessel or a surface-coated product having a hard coating layer is obtained, by coating a substrate of, for example, resin product with a resin composition for hard coating which comprises

(a) a poly[(meth)acryloyloxyalkyl] (iso)cyanurate represented by the following general formula (1) or (2): ##STR1## wherein X.sup.1, X.sup.2 and X.sup.3 are each an acryloyl group, methacryloyl group, hydrogen atom or an alkyl group, with a proviso that at least two of them are (meth)acryloyl groups, and R.sup.1, R.sup.2 and R.sup.3 are each an oxyalkylene group or a polyoxyalkylene group;

(b) a poly(meth)acrylated polyoxyalkane polyol;

(c) a photopolymerization initiator consisting of 2-methyl-1-[4-(methylthio)phenyl]-2-morpholino-1-propanone;

(d) a photopolymerization initiator based on thioxanthone;

(e) a UV-absorber based on monohydroxybenzophenone;

(f) an organic solvent.

Such surface-coated products and vessels have a hard coat which is more excellent than that of the prior art especially in the curing characteristics, such as the rate of curing etc., as well as in the coating properties, such as surface hardness, fastness to scratch and abrasion, flexibility, surface gloss, heat resistance, fastness to solvents and to alkali, weather resistance and tight

adhesion onto substrates, so that they can constitute reclaimable coated products in a form of, for example, returnable bottles.

ABSTRACT:

An apparatus for the treatment of liquids, gases and vapors originating from water impervious interment units comprises a plurality of vertical passages in the vertical walls between units. The upper ends of the vertical passages are connected to an exhaust system and the lower ends of the vertical passages are connected to a drain passage for liquids. Gases drawn through the exhaust system are subjected to sterilization processes including burning and filtering such that any gases discharged into the atmosphere are free of pathogens and odors. A process is also disclosed for the treatment of gases and vapors from the units.

DATE-ISSUED: September 11, 1990

INVENTOR-INFORMATION:

NAME	CITY	STATE	ZIP CODE	COUNTRY
LaBounty; Roy E.	Two Harbors	MN	55616	

US-CL-CURRENT: 294/68.26; 294/67.2

ABSTRACT:

A tray-like receptacle or container for catching falling debris from bridge deck demolitions is disclosed. The receptacle extends under a bridge deck and a support arm affixed to an end of the receptacle is disposed above the bridge deck. A crane suspends the receptacle with a cable attached to the support arm and another cable affixed to the receptacle is drawn in to tilt the receptacle so that crushed, collected concrete slides off an open end of the receptacle and into a dump truck.

The support arm of the receptacle is disconnectable for storage and transportation purposes.

TITLE: Process for the recovery of energy and in particular for the recovery of heat on the heat pump principle

DATE-ISSUED: March 11, 1980

INVENTOR-INFORMATION:

NAME	CITY	STATE	ZIP CODE	COUNTRY
Crede; Helfried	D-8021 Icking			DE

US-CL-CURRENT: 62/59; 126/400, 165/104.11, 165/104.17, 62/238.6

ABSTRACT:

A body of still water is confined in heat exchange with one or more ambient heat sources whose temperature is usually above but may drop near 0.degree. C. Heat is withdrawn from the body according to the heat-pump principle. If the temperature of the heat sources drops near zero the withdrawal of heat from the body results in the formation of ice in the body and the latent heat of fusion liberated during the ice formation is also withdrawn, so that the time periods during which the temperature of the ambient sources is near 0.degree. C. can be bridged. When the temperature of the ambient sources rises again their heat is used to re-melt the ice in the body of water.

TITLE: Ceiling grinding apparatus

DATE-ISSUED: April 6, 1976

INVENTOR-INFORMATION:

NAME	CITY	STATE	ZIP CODE	COUNTRY
Whitsett; Jack W.	Coral Gables	FL	33134	

US-CL-CURRENT: 451/354

ABSTRACT:

A ceiling grinding apparatus for use in surfacing concrete ceilings comprising a portable support assembly having independently suspended wheels; a central member vertically movable along the support assembly; a boom pivotally mounted on the central member; a grinding assembly coupled to one end of the boom including blade means rotatably supported in a housing; and a biasing mechanism for forcing the

blade means against the ceiling during the grinding operation. An exhaust system is connected to the housing for removing the dust and concrete chips therefrom and transferring this material to a collection bag. A hydraulic motor is used to rotate the blade means and is driven by a hydraulic pump coupled to an electrical motor, with the hydraulic fluid being stored in the central member.

TITLE: Sewage treatment and recycling system

DATE-ISSUED: January 20, 1976

INVENTOR-INFORMATION:

NAME	CITY	STATE	ZIP CODE	COUNTRY
Hadden; Lyall C.	Honeybrook	PA		
Benjamin; Charles T.	Honeybrook	PA		

US-CL-CURRENT: 210/205; 210/247, 210/258, 210/260

ABSTRACT:

A sewage treatment and recycling system is disclosed wherein effluent is initially treated in a septic tank and then flows over a perforated splash pan to be distributed evenly over a removable filter. The filtered effluent then passes through a second filter and into a holding tank from where it is pumped to a water tank and chlorinated before being sprayed over the land surface or used for other purposes.

TITLE: Concrete washout container

PUBLICATION-DATE: October 20, 2005

INVENTOR-INFORMATION:

NAME	CITY	STATE	COUNTRY
Jenkins, Mark	Elk Grove	CA	US

US-CL-CURRENT: [134/22.1](#); [134/104.2](#), [134/104.4](#), [134/123](#), [134/135](#), [134/22.14](#), [134/34](#)

ABSTRACT:

A washout container to which are mounted inclined ramps that allow a transit mixer, concrete pumping truck or other concrete handling vehicle to drive up over a portion of the container for dumping excess concrete and washing out waste concrete. The container cross-section may be rectangular to semi-circular, and is preferably fabricated with a steel structure. A watertight latching door assembly is coupled to the container to prevent leakage of collected liquid concrete waste material while allowing solidified concrete materials to be unloaded at a disposal site. The interior of the container is preferably lined with a material to which concrete will not adhere. The liner may be applied as a coating to the interior of the container or as a solid material retained within the container. In this way, solidified waste concrete can be easily removed from the container at the disposal site and preferably crushed for recycling.
